INSTRUCTIONS FOR AUTHORS

General Policy

IN VIVO (IV) is a multidisciplinary journal designed to bring together original high quality works and reviews on experimental and clinical biomedical research within the frames of human physiology, pathology and disease management. The topics of IN VIVO include: 1. Experimental development and application of new diagnostic and therapeutic procedures; 2. Pharmacological and toxicological evaluation of new drugs, drug combinations and drug delivery systems; 3. Clinical trials; 4. Development and characterization of models of biomedical research; 5. Cancer diagnosis and treatment; 6. Immunotherapy and vaccines; 7. Radiotherapy, Imaging; 8. Tissue engineering, Regenerative medicine; 9. Carcinogenesis; 10. Retrospective studies and case reports. 11. Abstracts and conference proceedings of scientific meetings, following consideration and approval by the Editorial Board. Each article should include a concrete conclusion constituting of a “new piece of knowledge” backed up by unambiguous and accurate scientific evidence. The principal aim of IN VIVO is to provide prompt online publication for accepted articles, generally within 1-2 months from final acceptance.

Manuscripts will be accepted on the understanding that they report original unpublished works that are not under consideration for publication by another journal, and that they will not be published again in the same form. All authors should sign a submission letter confirming the approval of their article contents. All material submitted to IN VIVO will be subject to peer-review, when appropriate, by two to three suitable referees. All manuscripts submitted to IN VIVO are urgently treated with absolute confidence, with access restricted to the Managing Editor, the journal’s secretary, the reviewers and the printers. The Editors reserve the right to improve manuscripts on grammar and style.

IV requires that all manuscripts be prepared in accordance with the “Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly work in Medical Journals” (https://www.icmje.org/icmje-recommendations.pdf) as published by the International Committee of Medical Journal Editors (ICMJE). We also support and adhere to the “Principles of Transparency and Best Practice in Scholarly Publishing” (https://publicationethics.org/resources/guidelines/principles-transparency-and-best-practice-scholarly-publishing) (a joint statement by COPE, DOAJ, WAME, and OASPA).

The Editors and Publishers of IN VIVO accept no responsibility for the contents and opinions expressed by the contributors. Authors should warrantee due diligence in the creation and issuance of their work.

IV appears bimonthly as an online-only open access journal through HighWire Press. All articles are published with gold open access, which means that the final published version is permanently and freely available to anyone. Our open access articles are distributed under the terms and conditions of the Creative Commons Attribution (CC BY-NC-ND) 4.0 international license (https://creativecommons.org/licenses/by-nc-nd/4.0). Upon acceptance, Authors will be asked to pay an online publication fee of USD 850.00 for articles up to 8 online pages (including figures and tables). Each additional excess page will be charged USD 60.00. Color will not be charged. Authors from developing countries may apply for a 25% discount after the acceptance of their paper.

Manuscript Format

Three types of papers may be submitted: (i) Full papers containing completed original work, (ii) review articles concerning fields of recognisable progress, and (iii) letters to the Editor. Papers should contain all essential data in order to make the presentation clear. Reasonable economy should be exercised with respect to the number of tables and illustrations used. Papers should be written in clear, concise American English.

Sections

All manuscripts should be divided into the following sections:

a. First page including (i) the title of the presented work [not exceeding fifteen (15) words], (ii) full names and affiliations of all authors (with a maximum of 20 authors), (iii) name of the corresponding author(s) (with a maximum of 2 corresponding authors) to whom proofs are to be sent (with affiliation, full postal address, telephone and e-mail), (iv) key words, (v) an abbreviated running title, (vi) an indication “review”, “clinical”, “epidemiological”, or “experimental” study, and (vii) the date of submission. Note: The order of the authors is not necessarily indicative of their contribution to the work. Authors may note their individual contribution(s) in the appropriate section(s) of the presented work. Affiliations should be indicated with a superscript number immediately after each author's name and in front of the appropriate address. Affiliations should not include street, box number or postal (zip) code.

b. Abstract not exceeding 250 words, organized according to the following headings: Background/Aim – Materials and Methods/Patients and Methods – Results – Conclusion. For Case Reports the structure should be as follows: Background/Aim – Case Report – Conclusion.

c. Introduction;

d. Materials and Methods/Patients and Methods/Case Report;

e. Results (not needed in a Case Report);

f. Discussion;

g. Conclusion;

h. Conflicts of Interest;

i. Authors’ Contributions;

j. Acknowledgements;

k. Funding;

l. References.
All pages must be numbered consecutively. Footnotes should be avoided. Review articles may follow a different style according to the subject matter and the author’s opinion.

**Headings and Subsections**
The article should be divided into clearly defined unnumbered sections. Main headings should be typed in bold on a separate line on the left of the page. The subheadings should be typed in bold italics at the left of the page on a separate line, and only the first word should begin with a capital letter. The sub-subheadings should be typed in italics on a new line, aligned full left. The text should start on the same line with subheadings and sub-subheadings.

**Figures**
All figures should appear at the end of the submitted document file and should be numbered with Arabic numerals (1, 2, 3, etc.) according to their sequence in the text. Once a manuscript is accepted all figures and graphs should be submitted separately in either jpg, tiff, or pdf format and at a minimum resolution of 300 dpi. Graphs must not be submitted as pictures made from drawings and must not require any artwork, typesetting, or size modifications. Symbols, numbering, and lettering should be clearly legible. The number and top of each figure must be indicated.

**Tables**
All tables should appear at the end of the submitted document file and should be numbered with Latin numerals (I, II, III, etc.) according to their sequence in the text. Once a manuscript is accepted, each table should be submitted separately in an editable format, typed double-spaced. Tables should include a short title. Tables should not be divided into two or more parts, should not contain vertical rules, and the main body of the table should not contain horizontal rules.

**Numerals**
The authors should write numbers of 10 or more as numerals except at the beginning of a sentence. Numbers one to nine should be written in words, unless they precede units of measure or are used as designators. The authors should use decimal points (not decimal commas) and a comma for thousands (1,000 and above). Decimals should not be quoted with naked points, for example the authors should quote 0.01, not .01. p-Values for significant outcomes can be quoted as below a threshold significance value (e.g., p<0.05, 0.01, 0.001), but wherever possible should be quoted as an exact probability value. Departure from a significance threshold of 0.05 should be stated and justified in the Methods. Nonsignificant outcomes should be indicated with an exact probability value whenever possible, or as NS or p>0.05, as appropriate for the test.

**Supplementary Material**
The journal does not have provision for use of supplementary material (Tables, Figures, Videos, or other material). The authors may (i) include their supplementary Tables/Figures as standard material or (ii) provide their own http/ftp link and upload the material on a website maintained by the authors (in this case the links for the supplementary material are given at the end of the paper under the section “Supplementary Material”) or (iii) exclude the material from publication and provide it only for Reviewers’ attention.

**Conflicts of Interest and Authors’ Contributions**
All authors will be asked to supply authors’ contributions and conflicts of interest information. We encourage authors to outline their individual contributions to the paper using the relevant CRediT roles: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; Writing - review & editing.

**References**
Authors must assume responsibility for the accuracy of the references used. Citations for the reference sections of submitted works should follow the form below and must be numbered consecutively. In the text, references should be cited by number in parenthesis, e.g., (1, 2). Examples:

**Nomenclature and Abbreviations**
nomenclature may be obtained from http://www.informatics.jax.org/. Standard abbreviations are preferable. The authors should define abbreviations that are not standard in this field at their first mention in the abstract, main text, Figures and Table legends, and should ensure consistency of abbreviations throughout the article.

Definitions
Sex generally refers to a set of biological attributes that are associated with physical and physiological features (e.g., chromosomal genotype, hormonal levels, internal and external anatomy). In humans, a binary sex categorization (male/female) is usually designated at birth (‘sex assigned at birth’), most often based solely on the visible external anatomy of a newborn. Gender generally refers to socially constructed roles, behaviours and identities of women, men, and gender-diverse people that occur in a historical and cultural context and may vary across societies and over time. The terms ‘sex’ and ‘gender’ can be ambiguous; thus, it is important for authors of studies on human subjects to define the way they are used.

Submission Process
Submission of Manuscripts
Please follow the Instructions for Authors regarding the format of your manuscript and references. Manuscripts must be submitted only through our online submission system at: http://www.iiar-submissions.com/login.html
In case a submission is incomplete, the corresponding author will be notified accordingly. Questions regarding difficulties in using the online submission system should be addressed to email: journals@iiar-anticancer.org

Article Transfer Service
If the Editor feels that the submitted manuscript is more suitable for an alternative journal, the authors might be asked to consider transferring the manuscript to such a journal. If they agree, the manuscript will be transferred, though the authors will have the opportunity to make changes to the manuscript before the submission is complete. The manuscript will be independently reviewed by the new journal.

Revision of Manuscripts
When the authors revise their paper, they need to prepare a detailed explanation of how they have dealt with the reviewers' comments and include their response in the first page of the revised manuscript file. In addition, the authors should use the reviewers’ edited manuscript file for their corrections (not the original submitted file) and submit online a highlighted version of their revised manuscript. For the highlighted version, the authors may use the Track Changes tool in MS Word or highlight their changes in yellow.

Galley Proofs
Unless otherwise indicated, galley proofs will be sent to the corresponding author of the submission. Corrections of galley proofs should be limited to typographical errors. Galley proofs should be returned corrected to the Editorial Office by email (iiar@iiar-anticancer.org) within 24 hours.

Specific Information and Additional Instructions for Authors
1. In Vivo (IV) will consider the publication of conference proceedings and/or abstracts provided that the material submitted fulfils the quality requirements and instructions of the journal, following the regular review process by two-three suitable referees.
2. An acknowledgement of receipt, including the article number, title and date of receipt is sent to the corresponding author of each manuscript upon receipt. If this receipt is not received within 20 days from submission, the author should call or write to the Editorial Office to ensure that the manuscript (or the receipt) was properly uploaded during the electronic submission.
3. Each manuscript submitted to IV is sent for peer-review (single-blind) in confidence to two-three suitable referees with the request to return the manuscript with their comments to the Editorial Office within 12 days from receipt. If reviewers need a longer time or wish to send the manuscript to another expert, the manuscript may be returned to the Editorial Office with a delay. All manuscripts submitted to IV, are treated in confidence, without access to any person other than the Managing Editor, the journal’s secretary, the reviewers, and the printers.
4. All accepted manuscripts are carefully corrected in style and language, if necessary, to make presentation clear (there is no fee for this service). Every effort is made (a) to maintain the personal style of the author’s writing and (b) to avoid change of meaning. Authors will be requested to examine carefully manuscripts which have undergone language correction at the pre-proof or proof stage.
5. Authors should pay attention to the following points when writing an article for IV:
   • The Instructions to Authors must be followed in every detail.
   • The presentation of the experimental methods should be clear and complete in every detail facilitating reproducibility by other scientists.
   • The presentation of results should be simple and straightforward in style. Results and discussion should not be combined into one section, unless the paper is short.
   • Results given in figures should not be repeated in tables.
   • Figures (graphs or photographs) should be prepared at a width of 8 or 17 cm with legible numbers and lettering.
   • Photographs should be clear with high contrast, presenting the actual observation described in the legend and in the text. Each legend should provide a complete description, being self-explanatory, including technique of preparation, information about the specimen and magnification.
   • Statistical analysis should be elaborated wherever it is necessary. Simplification of presentation by giving only numerical or % values should be avoided.
Fidelity of the techniques and reproducibility of the results should be points of particular importance in the discussion section. Authors are advised to check the correctness of their methods and results carefully before writing an article. Probable or dubious explanations should be avoided.

Authors should not cite results submitted for publication in the reference section. Such results may be described briefly in the text with a note in parenthesis (submitted for publication by… authors, year).

References. Each article should address, list, and discuss the entire spectrum of current publications relevant to its field. All cited references must provide sufficient and valid peer-reviewed results leading to clear and reliable conclusions.

By following these instructions, Authors will facilitate a more rapid review and processing of their manuscripts and will provide the readers with concise and useful papers.

6. Following review and acceptance, a manuscript is examined in language and style, and galley proofs are rapidly prepared. Second proofs are not sent unless required.

7. Authors should correct their galley proofs very carefully and preferably twice. An additional correction by a colleague always proves to be useful. Particular attention should be paid to chemical formulas, mathematical equations, symbols, medical nomenclature etc. Any system of correction marks can be used in a clear manner, preferably in red. Additions or clarifications are allowed provided that they improve the presentation but do not bring new results (no fee).

8. Articles submitted to IV may be rejected without review if:
   - they do not fall within the journal’s policy.
   - they do not follow the instructions for authors.
   - language is unclear.
   - results are not sufficient to support a final conclusion.
   - results are not objectively based on valid experiments.
   - they repeat results already published by the same or other authors before the submission to IV.
   - plagiarism is detected by plagiarism screening services.

[Rejection rate (2022): 65%].

9. Authors who wish to prepare a review should contact the Managing Editor of the journal in order to get confirmation of interest in the particular topic of the review. The expression of interest by the Managing Editor does not necessarily imply acceptance of the review by the journal.

10. Authors may inquire information about the status of their manuscript(s) by sending an e-mail to journals@iliar-anticancer.org

11. Authors who wish to edit a special issue on a particular topic should contact the Managing Editor.

This text is a combination of advice and suggestions contributed by Editors, Authors, Readers, and the Managing Editor of IV.

EDITORIAL POLICIES

General Policy
IN VIVO (IV) is a multidisciplinary journal designed to bring together original high quality works and reviews on experimental and clinical biomedical research within the frames of human physiology, pathology and disease management. The topics of IN VIVO include: 1. Experimental development and application of new diagnostic and therapeutic procedures; 2. Pharmacological and toxicological evaluation of new drugs, drug combinations and drug delivery systems; 3. Clinical trials; 4. Development and characterization of models of biomedical research; 5. Cancer diagnosis and treatment; 6. Immunotherapy and vaccines; 7. Radiotherapy, Imaging; 8. Tissue engineering, Regenerative medicine; 9. Carcinogenesis; 10. Retrospective studies and case reports. 11. Abstracts and conference proceedings of scientific meetings, following consideration and approval by the Editorial Board. Each article should include a concrete conclusion constituting of a “new piece of knowledge” backed up by unambiguous and accurate scientific evidence. The principal aim of IN VIVO is to provide prompt online publication for accepted articles, generally within 1-2 months from final acceptance.

Manuscripts will be accepted on the understanding that they report original unpublished works that are not under consideration for publication by another journal, and that they will not be published again in the same form. All authors should sign a submission letter confirming the approval of their article contents. All material submitted to IN VIVO will be subject to peer-review, when appropriate, by two to three suitable referees. All manuscripts submitted to IN VIVO are urgently treated with absolute confidence, with access restricted to the Managing Editor, the journal’s secretary, the reviewers and the printers. The Editors reserve the right to improve manuscripts on grammar and style.

IV requires that all manuscripts be prepared in accordance with the “Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly work in Medical Journals” (https://www.icmje.org/icmje-recommendations.pdf) as published by the International Committee of Medical Journal Editors (ICMJE). We also support and adhere to the “Principles of Transparency and Best Practice in Scholarly Publishing” (https://publicationethics.org/resources/guidelines/principles-transparency-and-best-practice-scholarly-publishing) (a joint statement by COPE, DOAJ, WAME, and OASPA).

The Editors and Publishers of IN VIVO accept no responsibility for the contents and opinions expressed by the contributors. Authors should warrant due diligence in the creation and issuance of their work.

Authorship
To be considered an author of a research article, a person must have made substantial contributions to the conception, design, execution, or interpretation of the study. All authors must also have been involved in drafting or revising the manuscript and must have given final approval of the version to be published. Any changes to the authorship of a manuscript must be approved by all authors, including any additions, deletions, or rearrangements of author names. Acknowledgements should be included in the manuscript to recognize individuals or organizations that contributed to the research but do not meet the criteria for authorship. The corresponding author is responsible for communicating with the journal during the submission, review, and publication process. This person is also responsible for ensuring that all authors have approved the final version of the manuscript and for providing contact information for readers who have questions or comments about the research. All authors must disclose any financial or other conflicts of interest that could be perceived as influencing the research. This information should be included in the manuscript. Authors must adhere to ethical guidelines and standards in the conduct of their research, including obtaining informed consent from study participants, minimizing harm to subjects, and protecting their privacy and confidentiality. Any ethical issues or concerns should be disclosed in the manuscript. Authors should provide access to the data and materials used in the research, including any software or algorithms, so that other researchers can replicate or build upon the findings. Data should be deposited in a recognized repository and the repository information should be included in the manuscript. Authors should ensure that their research is reproducible, meaning that other researchers can obtain similar results using the same data and methods. This can be achieved by providing detailed descriptions of methods and procedures, including any statistical analyses, in the manuscript.

Conflicts of Interest
Conflicts of interest refer to any financial, personal, or professional relationships or activities that could be perceived as potentially influencing the objectivity, integrity, or credibility of the research being published. Authors must disclose all potential competing interests, including those that may be perceived as conflicting, to the journal. This includes relationships or activities that have occurred within the past five years and those that are ongoing or anticipated. Reviewers and editors must also disclose any potential competing interests that could influence their ability to provide unbiased and objective reviews of manuscripts. The journal will carefully evaluate manuscripts that disclose potential competing interests and may seek additional information or clarification. The journal may also require authors to revise their manuscript or provide additional disclosures. Any conflicts of interest will be published along with the manuscript to provide transparency and allow readers to evaluate the potential impact on the research. The journal may take a number of steps to manage potential conflicts of interest, such as requiring authors to recuse themselves from the review process or seeking additional reviews from independent reviewers. If a conflict of interest is discovered post-publication, it will be added in the next available issue as an addendum.

Ethical Policies and Standards
Authors must adhere to ethical principles in the conduct of their research, including obtaining informed consent from human subjects, minimizing harm to subjects, and protecting their privacy and confidentiality.

Research involving human subjects must be approved by an institutional review board or ethics committee and must comply with international ethical guidelines, such as the Declaration of Helsinki (https://www.wma.net/wp-content/uploads/2016/11/DoH-Oct2008.pdf) and Title 45, U.S.
**Image Integrity and Standards**

Authors must ensure that images are presented accurately and honestly, without manipulation or alteration that could misrepresent the data or lead to incorrect conclusions. Any manipulation of images must be disclosed in the manuscript and explained in the figure legends. Authors must avoid duplicating images within a manuscript or across multiple manuscripts, unless the duplication is necessary for clarity or comparison. Any duplicated
images must be clearly labeled and explained in the figure legends. Authors must maintain the integrity of the image data, including raw data and processed images. They must ensure that images accurately represent the data and that any adjustments or enhancements do not distort or misrepresent the data. Figure legends and captions must accurately describe the content of the figures and provide sufficient information to allow readers to understand the data presented. They must also indicate the source of any previously published figures or images. Authors must provide any supporting information, such as original data or images, that is necessary to verify the findings presented in the manuscript. The supporting information must be of sufficient quality and resolution to allow readers to evaluate the data. Manuscripts may be subjected to image analysis software or visual inspection by the journal's editorial team to ensure the integrity of the images. Authors may be asked to provide original data or additional information to support the images presented in their manuscript. The journal may reject manuscripts that do not comply with these image integrity policies.

**Plagiarism and Duplicate Publication**

Plagiarism is the act of presenting someone else's work or ideas as your own, without proper attribution or permission. This can include copying text, data, images, or other materials without permission or proper citation. Plagiarism can take many forms, including verbatim copying, paraphrasing without proper attribution, and mosaic plagiarism (combining text from multiple sources without proper citation). It can also include self-plagiarism or reusing your own work without proper citation or permission. Authors can prevent plagiarism by properly citing all sources of information and obtaining permission to use copyrighted materials. They should also avoid copying text or data without permission and ensure that any borrowed material is properly paraphrased and attributed. All manuscripts will be subjected to plagiarism detection software (iThenticate) and manual review by the journal's editorial team to identify instances of plagiarism. The journal may also receive reports of suspected plagiarism from readers, other authors, or other sources. Plagiarism is a serious offense that can result in rejection of the manuscript, retraction of published articles, and damage to the author's reputation. The journal may also report cases of plagiarism to the author's institution or other relevant authorities. If plagiarism is detected in a published article, the journal may issue a correction or retraction to alert readers to the problem. The authors may also be required to provide an explanation or apology for the plagiarism.

**Corrections, Retractions and Matters Arising**

Corrections may be issued for errors that do not affect the overall findings or conclusions of a published article. These may include typographical errors, errors in figures or tables, or other minor mistakes. Retractions may be issued for serious errors or ethical concerns that call into question the validity or integrity of a published article. These may include fraud, plagiarism, or other ethical violations, as well as errors that significantly affect the findings or conclusions of the article. Decisions to issue corrections or retractions are based on a careful review of the available evidence and consideration of the potential impact on the scientific record. The journal may consult with the authors, reviewers, and other experts as part of this process. Corrections and retractions are issued through a formal process that involves notifying readers, indexing services, and other relevant parties. The journal may also require the authors to provide an explanation or response to the concerns raised. Authors are responsible for ensuring the accuracy and integrity of their published work and are expected to cooperate with the journal's efforts to address any errors or ethical concerns. They may be asked to provide additional information or participate in a formal investigation. Corrections and retractions can have a significant impact on the scientific record, and may be taken into account by other researchers, funding agencies, and other stakeholders. The journal seeks to ensure that corrections and retractions are issued promptly and transparently, and that the scientific record is preserved and protected.

**Peer Review**

Peer review is an essential part of the scholarly publishing process, helping to ensure the quality and integrity of published research. The primary purpose of peer review is to evaluate manuscripts for scientific validity, originality, and significance, and to provide constructive feedback to authors. There are different types of peer review, and IV uses the single-blind, where the reviewers' identities are concealed from the authors. Reviewers are typically selected based on their expertise and qualifications in the relevant field, and may include both academic researchers and professionals from industry or government. The journal may also consult with the authors, editors, or other experts in selecting reviewers. Reviewers are asked to evaluate manuscripts based on a set of criteria that may include scientific validity, originality, significance, methodology, and interpretation of results. They are also asked to provide feedback to the authors, including suggestions for improving the manuscript. Reviewers are expected to maintain confidentiality and avoid conflicts of interest when evaluating manuscripts. They should disclose any conflicts of interest or other potential biases that may affect their objectivity. Authors are expected to cooperate with the peer review process and respond constructively to feedback from reviewers. They may be asked to provide additional information or clarify aspects of the manuscript. The editor-in-chief or other editorial staff are responsible for making final decisions on manuscripts based on the feedback provided by reviewers. They may consult with additional experts or the authors as part of this process. Peer review is a valuable tool for evaluating the quality and validity of research, but it has limitations. It is not foolproof and may not catch all errors or ethical concerns. Additionally, the subjective nature of review criteria means that different reviewers may have different opinions on the same manuscript.

**Confidentiality**

Confidentiality is an important aspect of the scholarly publishing process, designed to protect the integrity and privacy of authors, reviewers, and editorial staff. The journal will not disclose any information about manuscripts submitted for consideration, including their content, to anyone outside of the editorial process without the explicit permission of the authors. All parties involved in the peer review process, including reviewers and editorial staff, are expected to maintain confidentiality and not share information about the manuscript with anyone outside of the review process. Reviewers should not discuss the manuscript with anyone, including colleagues, without the permission of the journal. Exceptions to confidentiality may include cases where the manuscript contains evidence of potential harm to individuals or the public, or where there are concerns about
plagiarism or other forms of research misconduct. In such cases, the journal may need to disclose information to relevant parties, including the authors, institutions, funding agencies, or regulatory bodies. To ensure confidentiality, journals may implement a variety of measures, including secure online submission systems, password-protected access to manuscripts, and nondisclosure agreements with reviewers and editorial staff. Violations of confidentiality can have serious consequences, including legal action, loss of reputation, and exclusion from future publication opportunities.

**Acknowledgements**

Acknowledgements in scholarly publishing are used to recognize individuals or organizations who have contributed to the research, but who may not qualify for authorship. Acknowledgements may also be used to disclose sources of funding, technical assistance, or other forms of support. Acknowledgements should be brief and specific and should only include those who have made a substantial contribution to the research. This can include individuals who have provided critical feedback or advice, contributed to experimental design or data analysis, or provided administrative or logistical support. Authors are responsible for ensuring that all individuals or organizations mentioned in the acknowledgements have given their permission to be recognized in the publication. Authors should also disclose any conflicts of interest related to the acknowledgements. Journals may have specific guidelines or requirements for the formatting and placement of acknowledgements. Authors should follow these guidelines carefully to ensure that their acknowledgements are properly recognized and attributed. While acknowledgements are an important way to recognize contributions to research, they should not be used to justify authorship or exclude individuals who meet the criteria for authorship. Authorship should be determined based on the criteria outlined by the journal, and all authors should be listed appropriately in the byline.

**Open Access**

IV (https://iv.iiarjournals.org/) appears bimonthly as an online-only open access journal through HighWire Press. All articles are published with gold open access, which means that the final published version is permanently and freely available to anyone. Our open access articles are distributed under the terms and conditions of the Creative Commons Attribution (CC BY-NC-ND) 4.0 international license (https://creativecommons.org/licenses/by-nc-nd/4.0). Upon acceptance, Authors will be asked to pay an online publication fee of USD 850.00 (effective January 1, 2023) for articles up to 8 online pages (including figures and tables). Each additional page will be charged USD 60.00. Color will not be charged. Authors from developing countries may apply for a 25% discount after the acceptance of their paper. UKRI-funded Authors retain the right to distribute the final published version of their accepted article, such as via an institutional and/or subject repository (e.g., EuropePMC), under a Creative Commons Attribution 4.0 International (CC BY-NC-ND) 4.0 license.

**Copyright**

Authors retain copyright. The unrestricted non-commercial use, distribution, and reproduction in any medium of IV articles for academic reasons is allowed, provided that the original work is properly cited. The Authors grant the permanent right to the publisher to use any articles published in this journal without any restriction, including academic advertising purposes. PDF, XML, and html files of all articles published in IV are the property of the publisher.

**Self-archiving**

When publishing open access content under a Creative Commons license, authors are advised to self-archive the published version, including a link to the published article's URL on the journal's website and the DOI number. The linking requirement is in place to ensure the scientific record's authenticity and integrity, with the published online version being the definitive version of record.

**Artificial Intelligence (AI) Policy**

Regarding the use of AI in authorship, we do not currently accept the use of Large Language AI Models (LLMs) (i.e. ChatGPT), since they do not meet our authorship criteria. The use of AI should be properly documented in the Methods section of the manuscript. Furthermore, regarding AI-generated images, we are unable to permit their use for publication. Exceptions to this policy may include images or videos that are specifically about AI. Finally, concerning non-generative machine learning tools that are used to manipulate, combine or enhance images or figures, they should clearly be stated upon submission.
